## TRACKING

The Satloc Cloud is a web-based tracking tool that allows users to view the location of one or multiple aircraft in real time.

- ✓ View real time flight tracks and spray tracks.
- ✓ Visualize job polygons assigned to aircraft on the Cloud map.
- ✓ Optional mapping interface with background terrain or non-terrain maps.

## WIRELESS DATA TRANSFER

The Satloc Cloud gives the ability to quickly transfer data to and from aircraft automatically, without pilot interaction. Falcon, Falcon Pro and G4 automatically receive job files needed to move quickly to the next job while still in the air, saving time and fuel. Application logs are automatically sent to the Cloud, harmonizing aircraft and billing operations. Direct data connection is available to transfer jobs and logs to/from 3<sup>rd</sup> party billing and management companies.

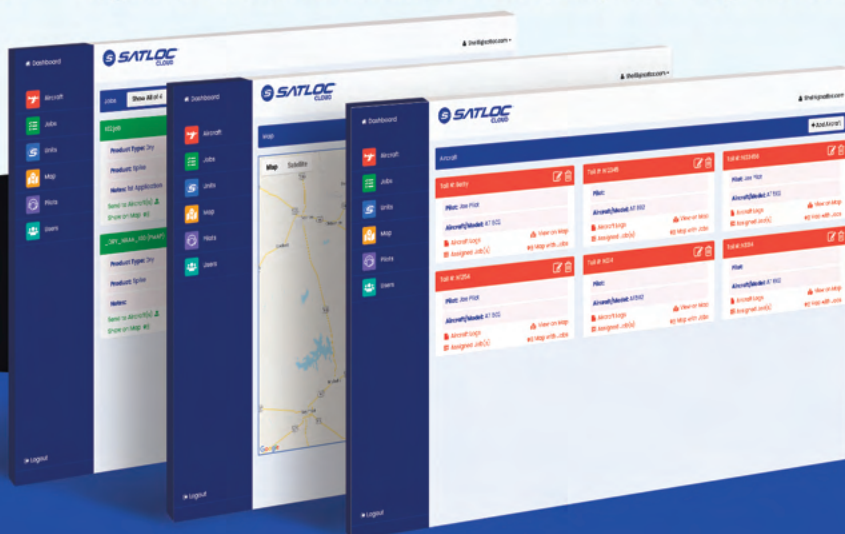

- ✓ Automatically send/receive: Job files, PMAPS, Shape Files, and Log files. No pilot interaction required for transfer.
- ✓ Job and Log files are automatically transferred when connected to internet. If no connection available at the time job is completed, then the file will transfer automatically once there is an available network.
- ✓ 3<sup>rd</sup> party software support with:

## EXCLUSIVE TO FALCON/FALCON PRO GPS

In conjunction with Satloc Cloud, once a set-up is complete for various things in the Falcon/Falcon Pro GPS, a company can share those set-ups across its fleet. For example, complete a boom set-up, name that boom, and then share the boom profile across the company's fleet. Resulting in less time spent setting up the same profile across all aircraft, effectively producing cost savings and reducing frustration.

- ✓ WiFi integration in the Falcon/Falcon Pro allows Cloud connectivity and remote tech support. With the pilot's permission, Satloc tech support can log into a Falcon remotely and assist in troubleshooting issues.
- ✓ A great feature of Satloc Cloud and Falcon/Falcon Pro is the setup profile is fully backed up when used together. This allows Cloud to restore any lost setup functions to your Falcon.
